

## Description

This CSV file should be imported into the md\_water\_services database. Select the database, right-click on it, and choose Table Data Import Wizard. All settings should be left on default.

## Data model

President Naledi appointed this auditor to investigate anomalous records identified in the water\_quality table. This auditor re-visited a randomly selected subset of 1620 records, as provided by Chidi Kunto, with the aim of re-recording the quality\_scores. The auditor also spoke to citizens close to the sources in order to understand why there were discrepancies.

Table 1: Description of the auditor report.

employee table		
Column name	Description	Related to table
location_id	Unique ID assigned to each source location.	location
type_of_water_source	Type or category of the water source that was re-examined.	water_source
true_water_source_score	Score representing the auditor's assessment of the water source's quality.	water_quality
statements	Statements obtained from citizens close to the water sources.
